Location: Vancouver, Washington 98665
Employment Type: Full-Time, Salaried
Travel Level: Light, Primarily within the Portland/Metro area, some periodic long-distance travel possible
Education Level: At least a 4-year Bachelors degree

Job Description

Evosus Solutions provides network consulting services to small and medium sized businesses. Our business is centered on serving people and making technology work for the betterment of our clients. We believe that such service depends on timeliness, high ethics, responsiveness, exceeding expectations, and caring. Centering our business on these core values has resulted in steady growth. Evosus Solutions, Inc. is in high demand and immediately needs an additional network consultant.

Each of our network consultants is assigned to various clients as either a primary or backup consultant. Primary consultants provide direct support to their clients in various roles. These roles include CIO, IT manager, server administrator, desktop support technician, and others. Each client has different needs so consultants must be flexible and provide solutions based on those needs.

Our team shares knowledge and skills so that no one consultant must attempt to know everything. Perhaps your client needs specific assistance with a Macintosh computer but you haven't worked on Macs for a few years. We have other consultants with extensive experience on Mac OS who will help you provide service to that client.

Our network consultants each have varied educational and employment backgrounds. Please submit a resume and cover letter if you can answer yes to all of the following questions.

1. Can you work well on your own with minimal supervision but also take guidance, direction, and constructive criticism from managers?
2. Can you work effectively in team environments? We work with each other, our vendors, outside consultants, and our clients
3. Can you be approachable and friendly even around people you don't know?
4. Can you communicate clearly and concisely when dealing with technical matters? For example, could you explain to technically-challenged people how a unified threat management appliance works without sounding condescending?
5. Do you believe that providing IT support requires building relationships?
6. Are you excited by challenges and a constantly changing environment?
7. Do you want to work for an employer who cares about you as much as your clients?

We support complete and secure networks including servers, desktops, applications, and networking devices. Our clients have anywhere from one to hundreds of desktops, up to dozens of servers, and one or more locations which are connected by VPN or other technologies.

We hire employees, not independent contractors. Benefits include the following:

- 1) Full-time salary
- 2) PTO
- 3) medical/dental insurance
- 4) SIMPLE IRA with up to 3% employer match
- 5) Mileage reimbursement
- 6) And more....

Skill Requirements

Required Skills:

- excellent written and verbal communications (writing sample will be required)
- professional appearance
- highly organized and able to juggle multiple projects
- must work well in a team environment
- excellent problem solving / troubleshooting skills
